

South African Reserve Bank

Survey of foreign portfolio assets (equity and long-term and short-term debt securities) and currency and deposits of South African individuals administered and managed by financial institutions in South Africa

Name of authorised official (in capital letters): Tel: Ext: Fax: E-mail: Web address: Signature: Date:	<p style="color: yellow; margin-bottom: 5px;">Reference number, name and address of organisation:</p> <div style="background-color: red; height: 100px; width: 100%;"></div> <p style="margin-top: 10px;">Due date for this return:</p> <p style="color: black; margin-top: 5px;">2011-04-29</p>	Year ended: 2010-12-31
---	---	--------------------------------------

General guidelines

1. Purpose of survey

This survey is conducted for statistical purposes in order to collect information about the holdings of South African individuals in equity and long-term and short-term debt securities issued by unrelated non-residents as at 31 December 2010. The information will be used to compile balance of payments and international investment position statistics for South Africa. The survey is conducted in co-ordination with other countries to facilitate international data comparability.

2. Who should complete this form?

This form must be completed by custodians (i.e. fund managers) who, as at 31 December 2010, managed the safekeeping of equity and debt securities issued by unrelated non-residents on behalf of South African individuals.

3. Authority

The information requested is collected in terms of the regulations published under Government Notices 702 and 703 of 20 April 1956.

4. Confidentiality

In terms of clause 4 of the regulations referred to above, all employees of the South African Reserve Bank involved in this survey are sworn to secrecy. Over and above this provision, assurance is given that no action of any kind will be taken under the Exchange Control Regulations against any organisation or person on the grounds of information furnished in this survey.

5. Penalty

Refusing or neglecting to furnish the information called for is an offence subject to penalty.

6. Completion of form

The completed form should be submitted by no later than **29 April 2011** to the Research Department of the South African Reserve Bank. The return may either be mailed or faxed to the Bank (see details below).

Enquiries should be addressed to: Balance of Payments Division, Research Department, South African Reserve Bank, PO Box 7433, Pretoria 0001; tel. no. 012 313-3379/4172 or fax no. 012 313-4013 or by sending an e-mail to Carlo.Somers@resbank.co.za or Barend.DeBeer@resbank.co.za.

7. Duplicate of return

A photocopy of this return should be retained for reference purposes.

Form B19

**Resident individuals' holdings of securities issued by unrelated non-residents as at
31 December 2010**

2. Long-term debt securities	0203						
3. Short-term debt securities	0304						
4. Currency and deposits	0505						

* For example, Anglo American plc, BHP Billiton plc, Dimension Data Holdings plc, Investec plc, Liberty International plc, Lonmin plc, Lonrho Africa plc, Old Mutual plc, Richemont Securities AG, and SAB Miller plc

Explanatory notes

1. Custodians

Custodians, namely financial institutions or fund managers, should report the securities issued by unrelated non-residents that were administered and managed as at 31 December 2010 on behalf of South African individuals.

An **unrelated non-resident** is defined as an incorporated or unincorporated enterprise in another country in which the South African investor owns less than 10 per cent of the ordinary shares or voting power (for an incorporated enterprise).

2. Country of residence

A **resident** is any individual, enterprise, or other organisation ordinarily domiciled in South Africa. Branches and subsidiaries of non-resident enterprises domiciled in South Africa are regarded as South African residents. **Ordinarily domiciled** is defined as the centre of economic interest of the entity; for instance in the case of an enterprise, the place where it engages in production. Corporations legally registered in South Africa are deemed to be resident even if they have no "physical presence". A non-resident of South Africa is any individual, enterprise or other organisation ordinarily domiciled in a country other than South Africa. Non-resident branches and subsidiaries of South African enterprises are regarded as non-residents.

In the survey form, securities are to be **attributed to the country of residence of the non-resident issuer of the securities**. Country attribution should be based on the country where the issuer is ordinarily domiciled. If there is doubt about the issuer's country of domicile then, as a general rule, the country of residence of any enterprise can be taken as the country where it is legally incorporated or, in the absence of legal incorporation, where it is legally domiciled. Securities issued by **international organisations (IOs)** should not be allocated to the country in which the IO is located, but rather to a separate column marked 'International Organisation' specified on Form B16.

An issuer's country of residence should not be determined by the currency of issue.

3. Equity and long-term and short-term debt securities

3.1 Security

A **security** is defined as an instrument that is traded or tradable. This survey covers the investment of institutional investors in equity and long-term and short-term debt securities issued by **unrelated** non-resident entities.

3.2 Equity securities

Equity securities cover all instruments and records acknowledging, after the claims of all creditors have been met, claims to the residual values of enterprises.

Include in equities:

- Ordinary shares
- Participating preference shares
- Depositary receipts (e.g. American depositary receipts) denoting the ownership of equity securities issued by non-residents
- Shares/units in mutual funds and investment trusts
- Equity securities that have been **sold** under repurchase agreements
- Equity securities that have been **lent** under a securities-lending arrangement
- Shares in non-resident companies listed on the JSE Limited (e.g. Anglo American plc). (Please note that the value of these holdings should be shown separately in line 1.2.)

Exclude from equities:

- Non-participating preference shares (should be included under long-term debt securities)
- Rights, options, warrants and other derivative instruments
- Equity securities that have been **bought** under repurchase agreements
- Equity securities that have been **acquired** under a securities-lending arrangement.

3.3 Long-term debt securities

Long-term debt securities cover bonds, debentures and notes that usually give the holder the unconditional right to a fixed cash flow or contractually determined variable money income and have an original term to maturity of **more than one year**.

Include in long-term debt securities:

- Bonds, such as Treasury, zero coupon, stripped, deep discounted, currency linked (e.g. dual-currency), floating rate, equity-related (e.g. convertible bonds) and eurobonds
- Asset-backed securities, such as mortgage-backed bonds and collateralised mortgage obligations (CMOs)
- Index-linked securities (e.g. property index certificates)
- Non-participating preference shares
- Floating rate notes (FRNs), such as perpetual rate notes (PRNs), variable rate notes (VRNs), structured FRNs, reverse FRNs, collared FRNs, step-up recovery floating rate notes (SURFs), and range/corridor/accrual notes
- Euro medium-term notes (EMTNs)
- Schuldscheine (German) notes
- Bonds with optional maturity dates, the last of which is more than one year after issue
- Debentures
- Negotiable certificates of deposit with a contractual maturity of more than one year
- Other long-term securities
- Bearer depository receipts denoting ownership of debt securities issued by non-residents
- Debt securities that have been **sold** under repurchase agreements
- Debt securities that have been **lent** under a securities-lending arrangement.

Exclude from long-term debt securities:

- Derivative instruments
- Loans
- Trade credit and accounts receivable
- Money-market instruments (e.g. Treasury notes, bankers' acceptances, negotiable certificates of deposit with a contractual maturity of one year or less, note issuance facilities, revolving underwriting facilities and promissory notes), including short-term debt securities
- Debt securities that have been **bought** under repurchase agreements
- Debt securities that have been **acquired** under a securities-lending arrangement.

3.4 Short-term debt securities

Short-term debt securities cover only market instruments such as bills, commercial paper and bankers' acceptances, which usually give the holder the unconditional right to receive a stated, fixed sum of money on a specified date and have an original term to maturity of one year or less.

Include in short-term debt securities:

- Treasury bills and notes
- Bankers' acceptances
- Commercial and financial paper
- Certificates of deposit with a contractual maturity of one year or less
- Short-term notes issued under note issuance facilities or revolving underwriting facilities and promissory notes (such short-term notes are included even though the underlying facility (the contingency) may be for more than one year because the notes themselves are of a short-term nature)
- Debt securities that have been **sold** under repurchase agreements
- Debt securities that have been **lent** under a securities-lending arrangement.

Exclude from short-term debt securities:

- Bonds such as Treasury, zero coupon, stripped, deep discounted, currency linked (e.g. dual-currency), floating rate, equity-related (e.g. convertible bonds) and eurobonds
- Asset-backed securities, such as mortgage-backed bonds and collateralised mortgage obligations (CMOs)
- Index-linked securities (e.g. property index certificates)
- Non-participating preference shares
- Floating rate notes (FRNs), such as perpetual rate notes (PRNs), variable rate notes (VRNs), structured FRNs, reverse FRNs, collared FRNs, step-up recovery floating rate notes (SURFs), and range/corridor/accrual notes
- Euro medium-term notes (EMTNs)
- Schuldscheine (German) notes
- Bonds with optional maturity dates, the last of which is more than one year after issue
- Debentures
- Negotiable certificates of deposit with contractual maturity of more than one year
- Other long-term securities
- Bearer depository receipts denoting ownership of debt securities issued by non-residents
- Debt securities that have been **sold** under repurchase agreements
- Debt securities that have been **lent** under a securities-lending arrangement
- Derivative instruments
- Loans
- Trade credit and accounts receivable.

Financial derivatives should not be reported as they are not classified as 'securities' but as a separate type of instrument. Record the value of the underlying security separately from any derivative that may be held in relation to it. However, if a security has an embedded derivative, do not attempt to separate the security from the **embedded derivative**. Include the value of such a security, including the embedded financial derivative, in your submission.

4. Valuation

Market value should be used to report all holdings of securities. Please **do not** report the face value of the security as the market value.

4.1 Valuation of equity securities

Equity securities should be reported at market prices converted to South African rand, using the exchange rate prevailing at 31 December 2010.

For enterprises listed on a stock exchange, the market value of your holding of equity securities should be calculated by using the market price on the stock exchange prevailing as at 31 December 2010.

For unlisted enterprises, the market value of equity securities as at 31 December 2010 can be estimated by using one of the following methods:

- A recent transaction price
- Director's valuation
- Net asset value. (Net asset value is equal to total assets, including intangibles, less non-equity liabilities and the paid-up value of non-voting shares. Assets and liabilities should be recorded at current, rather than historical, value.)

4.2 Valuation of debt securities

Debt securities should be recorded using one of the market valuation methods listed below in descending order of preference and converted to South African rand, using the exchange rate prevailing as at 31 December 2010:

- A quoted traded market price at the close of business on 31 December 2010
- The present value of the expected stream of future payments/receipts associated with the securities
- For unlisted securities, the price used to value securities for accounting or regulatory purposes
- For deep discount or zero-coupon securities, the issue price plus amortisation of the discount
- For debt instruments issued at a premium, the issue price less the amortisation of the premium.

5. Exclusion of securities issued by related enterprises

Securities (whether equities or debt) issued by a non-resident enterprise that is related to the resident owner of those securities **should be excluded** from this report. Related non-resident enterprises are enterprises in which an enterprise **group** has an equity interest of 10 per cent or more or where a non-resident has more than 10 per cent of the holdings in your group. Ownership is measured in terms of the ordinary shares or the voting stock of incorporated enterprises or an equivalent beneficial interest in unincorporated enterprises. Where such a relationship exists, exclude all securities (debt and equities). The only exception is if the non-resident entity who issued the security and the domestic resident owner of the security are affiliated financial intermediaries (e.g. banks). In these circumstances securities issued by related enterprises, other than equity or permanent debt, should be included in this report.

6. Treatment of collective investment schemes

Units in collective investment schemes (mutual funds, investment trusts, unit trusts) should be classified as equity, regardless of the type of fund or assets that the fund acquires. Furthermore, it is important to note that the economy of a country where a collective investment scheme is registered is regarded as its domicile.

7. Treatment of securities involved in repurchase and securities-lending arrangements

A **repurchase agreement**¹ (repo) is an arrangement involving the sale of securities at a specified price with a commitment² to repurchasing the same or similar securities at a fixed price on a specified future date. A reverse repo is the same transaction seen from the other side, that is, an agreement whereby a security is purchased at a specified price with a commitment to reselling the same or similar securities at a fixed price on a specified future date. **Securities (or stock or bond)** lending is an arrangement whereby the ownership of a security is transferred in return for collateral, usually another security, on condition that the security or similar securities will revert to the original owner at a specified future date.

- Securities acquired under reverse repurchase agreements or securities-borrowing arrangements are to be *excluded* from the form.
- Securities sold under repurchase agreements or lent under securities-lending arrangements are to be *included* in the form.
- Securities acquired under reverse repurchase or securities-borrowing arrangements and subsequently sold to a third party should be reported as a negative holding, namely a short position.
- Valuations of securities under repurchase or securities-lending arrangements should be at *market value* as at 31 December 2010.

¹ Also included are sale/buy backs, carries, bond or stock lending with cash collateral and similar transactions that involve the sale of a security with a commitment to repurchasing it at a fixed price and on a specified date or on demand.

² If there is no commitment to repurchasing the securities, the transactions should be regarded as a straight sale of the security and should not be classified as a repo.

8. Treatment of depositary receipts

Depository receipts, which denote the ownership of equity or debt securities issued by non-residents (e.g. American depositary receipts (ADRs) or bearer depositary receipts (BDRs)) should be attributed to the country of residence of the issuer of the security underlying the depositary receipt. Financial intermediaries should not report holdings of any securities against which depositary receipts have been issued and sold. However, if a depositary receipt has been issued before the financial institution arranging the issue has acquired the underlying securities, then that financial institution should report a negative holding in the underlying security.

9. Treatment of stripped securities

Stripped securities (strips) are securities that have been transformed from a principal amount with periodic interest coupons into a series of zero-coupon securities, with the range of maturities matching the coupon payment dates and the redemption date of the principal amount.

- If strips remain the direct obligation of the original issuer, then the residency of the issuer of the strips remains the same as that of the original security. Dealers who request that a settlement or clearing house should create strips from an existing security issued by a non-resident should not report ownership of the underlying security once the strips have been created.
- If strips have been created and issued by an entity in its own name, security should be classified according to the residence of the issuer of the strips. In turn, such an issuer of strips should report its ownership of the underlying securities if they were issued by a non-resident.

Strips with an **original** maturity of less than one year are classified as money-market instruments and thus, if identifiable, should be reported as short-term debt securities.

10. Asset-backed securities

In reporting the market value of holdings of asset-backed securities, the respondent must be aware of the possibility of early partial redemption of the principal. The market value of the principal amount outstanding as at 31 December 2010 should be reported. If the principal has been repaid, this market value will not be the same as the original face value revalued at end-period market prices.

11. Country of issue

Please report your entity's holdings of securities issued according to the list set out in **Annexure A**. The holdings of issues of securities by international organisations (e.g. World Bank or the United Nations) should be shown separately. These holdings should not be reported as issues of the countries in which they are physically located, because they do not qualify as liabilities of those countries.
