**FOR RELEASE: 09:00 A.M., Tuesday, 21 May 2019**

### **Composite business cycle indicators for South Africa**

- The composite **leading** business cycle indicator *decreased* by 0.4% on a month-to-month basis in March 2019. Two of the nine available component time series decreased while seven increased. The negative contributions to the movement in the composite leading business cycle indicator in March came from a decrease in the number of residential building plans approved and a deceleration in the twelve-month percentage change in job advertisement space. The largest positive contributions resulted from an acceleration in the twelve-month percentage change in the number of new passenger vehicles sold and an increase in the South African produced export commodity price index (US dollar based).
- The composite **coincident** business cycle indicator *decreased* by 0.1% on a month-to-month basis in February 2019.
- The composite **lagging** business cycle indicator *increased* by 1.5% on a month-to-month basis in February 2019.

**The next release is scheduled for 25 June 2019, at 09:00 A.M.**
