^{1.} Figures might not add up due to rounding.

The change in the gross reserves and the international liquidity position mainly reflects foreign exchange swaps conducted for liquidity management purposes which was partially offset by the decline in the US dollar gold price, valuation adjustments related to the overall appreciation of the US dollar against the major currencies and foreign exchange payments made on behalf of government.

^{2.} Foreign exchange reserves include foreign currency deposits received (FDR).

^{3.} FDR balances include the proceeds of the government's foreign bond issuances and foreign exchange purchases by the National Treasury (NT), both through outright purchases and foreign exchange swaps.

^{4.} The forward position mainly reflects outstanding foreign exchange forward transactions and includes foreign exchange swaps to sterilise foreign exchange purchases, as well as swaps for liquidity management.
