Market (US\$)	1,770.29	1 685.42	5.04
Statutory (ZAR)	25,470.22	24 993.60	2.15

1. Figures might not add up due to rounding.
2. Foreign exchange reserves include foreign currency deposits received (FDR).
3. FDR balances include the foreign loans and foreign exchange purchases by the National Treasury (NT), both through outright purchases and foreign exchange swaps.
4. The forward position mainly reflects outstanding foreign exchange forward transactions. These include foreign exchange swaps to sterilise foreign exchange purchases and liquidity management swaps.
5. Sterilisation foreign exchange swaps refers to swaps conducted to sterilise foreign exchange purchases from foreign direct investments and other foreign exchange inflows, such as from International Finance Institutions (IFIS).
6. Liquidity management swaps refers to foreign exchange swaps conducted in the normal course of business to manage money market liquidity.

The increase in the gross reserves and the international liquidity position was mainly due to the increase in the US dollar gold price, the depreciation of the US dollar against other currencies and foreign exchange swaps conducted for liquidity management purposes. These factors were partially offset by foreign exchange payments made on behalf of government.
