6. Conclusion.....	5

1. Introduction

- 1.1 Information Technology (IT) risks can pose significant adverse technology failures to financial institutions, potentially compromising their viability. For this reason, IT risk management is fundamental for a financial institution to achieve its strategic, corporate, operational, and reputational objectives.
- 1.2 The introduction of the fourth industrial revolution further changed how financial institutions interact with their customers, increasingly deploying more advanced technology and online systems. Financial institutions are also faced with the challenge of keeping pace with the needs and preferences of their customers who are embracing financial innovation as well as the improved use of technology in the delivery of financial products and services.
- 1.3 Digitisation, digitalisation and other emerging technologies have promoted IT to become an integral part of the business enablement of strategies including the ability to incorporate customer needs. Technologically enabled financial innovation has also resulted in new business models, applications, processes, or products with an associated material effect on financial markets and institutions and the provision of financial services. These developments have also led to an increased change in the nature and scope of risks in the financial sector. Such risks include strategic risk, operational risk, cyber-risk and compliance risk.
- 1.4 The advancement of IT requires financial institutions to fully understand the magnitude and intensification of IT risks from these developments. In this regard, financial institutions must put in place adequate and robust risk management systems as well as operating processes to ensure that they appropriately identify, manage and monitor IT risks.

2. Statement of the need for the Joint Standard

- 2.1 In order for the Prudential Authority (PA) and the Financial Sector Conduct Authority (FSCA) (jointly referred to as the Authorities) to achieve their respective objectives, the Financial Sector Regulation Act 9 of 2017 (FSR Act) provides for

the Authorities to make risk management and internal control requirements in addition to other matters specified, that apply to financial institutions.

- 2.2 Information Technology is at the centre of many financial institutions concerning how they conduct their business and deliver financial products and services to their customers. When critical systems fail and customers cannot access financial products and services, the business operations of a financial institution may immediately come to a standstill.
- 2.3 The impact on customers would be immediate, with significant consequences to the financial institution, including reputational damage, regulatory breaches, and revenue and business losses.
- 2.4 Also, given the role played by the financial sector in the economy, offering access to the payment system, transformation of assets, and managing risks, such disruptions can have additional consequences to the broader economy.
- 2.5 In light of the above, there is a need for financial institutions and supervisors to be vigilant and monitor practices and risks that might inhibit beneficial innovations in the financial sector. It is important that financial institutions put in place robust IT risk management frameworks to manage IT risks ensuring that they have effective governance structures and risk management processes that appropriately identify, manage and monitor IT risks.
- 2.6 As a result, there is a need to provide an appropriate and comprehensive regulatory framework governing IT risk management from both a prudential and conduct perspective.
- 2.7 It is against this background that the proposed Joint Standard on information technology risk management has been drafted and is being released for public consultation.

3. The objectives of the proposed Joint Standard

- 3.1 The proposed Joint Standard sets out the IT risk management principles that financial institutions must comply with for achieving sound practices and processes in managing IT risks.

3.2 The proposed Joint Standard seeks to address the following:

- ensure that financial institutions have established a sound and robust IT risk management framework;
- assist financial institutions in integrating technology risk management into their overall management system; and
- ensure that financial institutions have implemented information security controls for the information held on IT systems.

4. Statement of the expected impact of the Joint Standard

4.1 Without pre-empting the outcome of the consultation, the Authorities are of the view that financial institutions have already put in place, or have plans to implement, the IT risk management controls. As such, the Authorities do not anticipate that there will be material changes and consequently costs, which would be required to the financial institutions' IT systems, to implement and comply with the requirements set out by this proposed Joint Standard.

4.2 However, the Authorities acknowledge that this is a preliminary assessment of the potential impact of the proposed Joint Standard and is subject to comments and inputs that may be submitted by the relevant stakeholders.

4.3 Interested stakeholders are encouraged to identify any potential risks or unintended consequences that might arise from the implementation of the proposed Joint Standard and submit those to the Authorities as part of the consultation process.

5. Statement on the intended operation of the Joint Standard

5.1 The proposed Joint Standard will apply to all:

- banks and bank controlling companies (banks) registered under the Banks Act 94 of 1990;
- mutual banks registered under the Mutual Banks Act 24 of 1993;
- insurers and insurance groups (insurers) licensed under the Insurance Act 18 of 2017;
- market infrastructures licensed under the Financial Markets Act 19 of 2012;

- managers of collective investment schemes licensed under the Collective Investment Scheme Control Act 45 of 2002;
- a discretionary FSP as contemplated in the Code of Conduct for Administrative and Discretionary FSPS, 2003; and
- an administrative FSP as contemplated in the Code of Conduct for Administrative and Discretionary FSPS, 2003.

5.2 Financial institutions are expected to implement IT controls that are commensurate with their risk appetite, based on the nature and size of the financial institution's operations.

5.3 The Authorities will in future, as part of their supervisory programmes, review and assess the adequacy of financial institution's policies, processes, and practices related to IT risk concerning financial institutions covered in terms of this proposed Joint Standard as well as the financial institutions not covered by the Joint Standard. Appropriate and proportionate regulatory instruments and/or guidance on IT risk management will be developed for co-operative financial institutions, co-operative banks, and micro-insurers in the future.

6. Conclusion

6.1 The draft Joint Standard and this Statement are prepared and published in terms of section 98 of the FSRA.

6.2 Following the consultation process, the Authorities will update the draft Joint Standard and this statement accordingly.

6.3 The draft Joint Standard and the accompanying documents will then be submitted to Parliament for at least 30 days while it is in session before the Joint Standard is subsequently made.¹

¹ Assuming no material amendments to the draft Joint Standard is required necessitating another round of public consultation.
