

Notes to tables

Non-resident and real estate transactions – Table S–32

The statistics of non-resident bond transactions on the JSE Limited (JSE) in table KB204 were revised from January 2019, to now reflect aggregated settled trades on settlement date. The statistics prior to 2019 continue to reflect reported matched trades aggregated on trade date. The statistics before and after January 2019 are therefore not comparable due to the changes from trade date to settlement date and from reported matched trades to settled trades, thus excluding unsettled trades.

Non-bank financial institutions – Table S–47

The statistics of non-bank financial institutions in tables KB235 and KB236 reflect the consolidated assets and liabilities of the following institutional subsectors: unit trusts, the Public Investment Corporation (PIC), life and non-life insurers, official and private pension funds, participation bond schemes, finance companies and non-monetary public financial corporations. These tables now include the revised PIC statistics as from the first quarter of 2010, as clarified in the notes to tables in the June 2020 edition of the *Quarterly Bulletin*, as well as the new unit trust statistics as from the third quarter of 2020, as discussed in the notes to tables in the December 2020 edition of the *Quarterly Bulletin*. The allocations across the assets in table KB235 changed due to the expanded financial instrument breakdown of both unit trusts and the PIC. The format of the liabilities in table KB236 changed with the reclassification of funds with the PIC, and deposits and funds received by public financial corporations, to other technical reserves and other liabilities, which led to the removal of the funds received column.

Trade account of the balance of payments by kind of economic activity – Table S–86 and by country and product – Table S–87

The trade statistics have been expanded with two additional tables which present disaggregated statistics of the quarterly, not seasonally adjusted and not annualised, aggregates currently published in table KB502 on page S–83 in this edition of the *Quarterly Bulletin*.

The trade statistics by kind of economic activity in table KB534 disaggregates the value of merchandise exports and imports at current prices into mining, manufacturing and agriculture as well as into the largest contributing components. The second part of the table reflects the percentage contributions of the components for both merchandise exports and imports.

The trade statistics by country and product in table KB535 firstly disaggregates the value of merchandise exports and imports at current prices in terms of the 10 largest trading partner countries, and secondly in terms of the 10 largest contributing products on a Harmonised System four-digit (HS4) level.
