A statistical presentation of South Africa's quarterly
national accounts for the period 1960 to 1974

'n Statistiese aanbieding van Suid-Afrika se kwartaallikse
nasionale rekeninge vir die tydperk 1960 tot 1974

A statistical presentation of South Africa's quarterly national accounts statistics for the period 1960 to 1974

Introduction

Annual national accounts statistics for South Africa have been published in the *Quarterly Bulletin* of the South African Reserve Bank for many years. Comparable data, covering the period 1946 to 1970, were published in a *Supplement* to the June 1971 issue of the *Quarterly Bulletin* and information for subsequent years in current issues of the *Bulletin*. Annual national accounts statistics are very useful in the formulation of broad economic policy and for research relating to economic growth and structural changes in the economy, and also form the basis of medium-term economic projections such as those contained in the Economic Development Programme. Annual national accounts are, however, of limited use in the formulation of short-term monetary and fiscal policy. For this purpose, national accounts statistics on a quarterly or even a monthly basis are required. Quarterly or monthly statistics are also useful in analysing the expenditure items sustaining economic activity and in determining the underlying strength or weakness of the economic situation at any particular moment of time. The data also form the basis of econometric studies.

To provide in these needs, the Reserve Bank in 1960 started to collect data for the compilation of national accounts on a quarterly basis. Because the basic information underlying the quarterly estimates was initially not available and subsequently subject to substantial margins of error, quarterly national accounts figures were, in the early stages, judged not reliable enough for publication and were also subject to frequent revisions. Consequently, the Reserve Bank was reluctant to publish these estimates although they were calculated on a regular basis and the trends were used in the annual and quarterly economic reviews of the Reserve Bank. Graphs showing the trends in the seasonally adjusted aggregates, expressed at an annual rate, appeared regularly in the *Quarterly Bulletin* and the *Annual Economic Report* of the Reserve Bank.

With the improvement in the basic statistics, the Reserve Bank decided to publish for the first time certain seasonally adjusted and unadjusted quarterly national accounts data in the March and June 1971 *Quarterly Bulletins*. Historical quarterly data for the

period 1960 to 1970 were also published in Tables 4 and 5 of "A statistical presentation of South Africa's national accounts for the period 1946 to 1970", which appeared as a *Supplement* to the Reserve Bank's *Quarterly Bulletin* of June 1971. As the quarterly figures were subject to wider margins of error than annual data, the quarterly estimates were initially rounded off to the nearest R100 million. Subsequently, the Reserve Bank, in its June 1975 issue of the *Quarterly Bulletin*, rounded off the quarterly information to the nearest million rand and, in addition, also added two tables which contained more detail of private consumption expenditure and gross domestic fixed investment on a quarterly basis.

The purpose of this *Supplement* is to publish, for the period 1960 to 1974, quarterly seasonally adjusted and unadjusted estimates of all the annual national accounts data currently appearing in the *Quarterly Bulletin*, rounded off to the nearest million rand. It is hoped that the publication of these quarterly estimates will be useful to researchers in the field of short-term economic tendencies.

As mentioned previously, quarterly estimates are less accurate, and therefore less reliable, than annual figures and should only be regarded as approximate indications of broad tendencies. It should also be borne in mind that quarterly national accounts statistics are subject to frequent and substantial revision, in particular for the most recent quarters. This phenomenon does not only apply to South Africa, but to the data of all countries in which quarterly estimates are made and published.

The main reasons for the continuous revision of quarterly estimates are the following: (1) quarterly statistics relating to the most recent quarter or two quarters are, and will always be, of a preliminary nature; (2) annual data concerning the national accounts are normally revised once a year for a few years back and as a result the relevant quarterly data also have to be changed; (3) census results which serve as the basis for annual figures, normally only become available years after the actual date of the census, and necessitate the revision of annual as well as quarterly figures; (4)

economic time series, used as a basis for quarterly estimates, are based on random *samples* and are accordingly subject to a certain margin of error; (5) seasonal indices exclude seasonal influences only approximately; and (6) seasonal factors are revised periodically, resulting in changes in the seasonally adjusted figures.

Methods of calculation and sources of information

In this section a brief discussion will be provided of the sources used and methods employed to obtain quarterly estimates of national accounts data.

The gross domestic product

As from the first quarter of 1969 quarterly estimates of the gross domestic product at factor cost by kind of economic activity have been made and published by the Department of Statistics. The quarterly estimates for the period 1960 to 1968 were calculated by the Reserve Bank. The methods of calculation and sources of information used by the Reserve Bank and the Department of Statistics in the quarterly estimates are as follows:

(a) Remuneration of employees

The calculation of remuneration of employees on a quarterly basis is based on monthly and quarterly data of wages and salaries paid to employees in virtually all sectors of the economy, collected and published by the Department of Statistics. At present these series cover more than eighty per cent of all wages and salaries earned in the non-agricultural sector of the economy. Quarterly wages and salaries paid by the agricultural sector are estimated by the Department of Agricultural Economics and Marketing.

(b) Gross operating surplus

The gross operating surplus of *agriculture, forestry and fishing* is estimated by the Department of Agricultural Economics and Marketing by deducting from the gross cash receipts of agriculture in a specific quarter the value of intermediate goods and services consumed and the remuneration paid to employees. The gross operating surplus of *mining, manufacturing and trade* is estimated on the basis of the results of quarterly surveys of financial statistics conducted by the Department of Statistics. No quarterly financial statistics are as yet being collected for the *construction* sector and in this case the operating surplus is obtained by means of interpolation and extrapolation of annual figures on the basis of the value of buildings completed during specific quarters. For the sector *electricity, gas and water* the operating surplus is calculated from quarterly information obtained from the most important enterprises involved. In the case of *transport, storage and communication* the operating surplus of the South African Railways is calculated from the monthly publication of its trading results, whereas that of the

Department of Posts and Telecommunications is based on quarterly statistics submitted to the Reserve Bank and the Department of Statistics. Financial data in regard to *financial institutions* are obtained by the Reserve Bank from monetary banking institutions, building societies and insurance companies. In the case of *real estate* the operating surplus is estimated on the basis of the total number of residential units and the indices of house and flat rent.

To convert the gross domestic product at *factor cost* to *market prices*, indirect taxes are added and subsidies deducted. These two items are obtained from an analysis of government accounts by the Reserve Bank. To arrive at the gross *national* product at market prices, net factor payments to the rest of the world are deducted from the estimates of gross *domestic* product. These payments are obtained from balance of payments data compiled by the Reserve Bank.

Private consumption expenditure

Quarterly estimates of private consumption expenditure are based on a large number of sources. Expenditure on food is estimated by the Department of Agricultural Economics and Marketing whose calculations, in turn, are based on quarterly data concerning the marketing of a number of the most important agricultural products. Consumer outlays on beverages and tobacco are estimated on the basis of monthly excise figures. Estimates of expenditure on clothing, footwear, furniture, furnishings, medicine, recreational and entertainment goods, etc., are based on monthly retail sales data collected by the Department of Statistics. The value of new transport equipment purchased quarterly by households, is arrived at from the number of motor vehicles and motor cycles sold monthly, multiplied by appropriate prices. Running expenses of private motor vehicles such as, petrol, oil, tyres and spare parts are calculated by using quarterly trading revenue data of the motor trade published by the Department of Statistics. Rent paid is based on the number of dwelling units and average rent on houses and flats collected by the Department of Statistics. The remaining part of private consumption on a quarterly basis is estimated on the basis of miscellaneous monthly and quarterly series such as the income of the South African Railways and the Department of Posts and Telecommunications, the number of deaths and births, sales of newspapers and periodicals, hospital fees accruing to provincial administrations, licence fees collected, etc.

Government consumption expenditure

Current expenditure by general government covers the consumption outlays by all non-trading departments of central, provincial and local governments. Consumption expenditure of the central government is provisionally based on issues from the Exchequer Account and subsequently revised on the basis of information on actual expenditure obtained from the Department of

Statistics and from returns submitted to the Bank by extra-budgetary funds. The relative quarterly expenditure of provincial administrations is compiled from returns submitted directly to the Reserve Bank, whereas that of local authorities is estimated from quarterly data collected by the Department of Statistics.

Gross domestic investment

The investment of public authorities, i.e. the central government, provincial administrations and local authorities, as well as that of public corporations, is estimated on the basis of quarterly returns submitted to the Reserve Bank by the South African Railways, the Department of Posts and Telecommunications, the largest public corporations, all the provincial administrations and information obtained from a sample survey of the more important government departments and local authorities.

As far as the investment of the private sector is concerned, the investment of *agriculture* is estimated by the Department of Agricultural Economics and Marketing on the basis of quarterly surveys. Fixed investment by *manufacturing* and *mining* is based on quarterly sample surveys of capital expenditure conducted by the Department of Statistics. Estimates of investment on *residential buildings* and the outlays on buildings by the sectors *commerce*, *private transport*, *financial institutions*, etc., are based on the value of buildings completed in the metropolitan and certain other urban areas collected on a monthly basis by the Department of Statistics. Expenditure on machinery by *commerce* is calculated by using the results of quarterly surveys by the Department of Statistics in respect of the retail, wholesale and the motor trade. The same sources are used for the purpose of estimating the change in inventories. *Transfer costs* are based on transfer duties collected by the central government.

Seasonal adjustment of national accounts data

Most national accounts series show a distinct seasonal pattern, arising from such factors as climatic conditions, which influence the production and marketing of agricultural crops; public holidays and festive seasons such as Christmas and the Easter week-end, which affect personal expenditure; tax collections on specific dates of the year, which have an influence on government revenue and corporate saving; etc. In these cases it is difficult to determine the basic underlying tendencies in the data because they are obscured by the regular seasonal pattern. For this reason, it is desirable to eliminate the influence of seasonal movements from economic data, although this can only be done approximately.

Seasonal factors or indices are based on the seasonal pattern evident in a specific series over a number of years but are, of course, subject to a certain margin of error, whether they are held constant or changed gradually. Notwithstanding the problems

relating to the technique followed in regard to the adjustment of data for seasonal influences, the adjusted totals will provide a more accurate picture of basic economic conditions than the unadjusted data. If the seasonally adjusted quarterly data are multiplied by four, an indication is obtained of the possible magnitude of the annual total if the level of economic activity of the specific quarter should continue to prevail during four consecutive quarters. The totals obtained in this manner are referred to as "seasonally adjusted at an annual rate".

The Reserve Bank has chosen the X-11 Variant of the *U.S. Census Method II* from a number of existing methods of adjusting economic time series for seasonal variations. This method, currently widely used throughout the world, was discussed in detail in the *Supplement to the South African Reserve Bank Quarterly Bulletin*, September 1971, titled "A statistical presentation of selected economic indicators of South Africa for the period 1946 to 1970".

'n Statistiese aanbieding van Suid-Afrika se kwartaallikse nasionale rekeninge vir die tydperk 1960 tot 1974

Inleiding

Jaarlikse nasionale rekeninge-statistiek vir Suid-Afrika word reeds baie jare in die *Kwartaalblad* van die Reserwebank gepubliseer. Vergelykbare gegewens, wat die tydperk 1946 tot 1970 dek, is in 'n *Bylaag* tot die Junie 1971-uitgawe van die *Kwartaalblad* gepubliseer, en inligting vir daaropvolgende jare in die lopende uitgawes van die *Kwartaalblad*. Jaarlikse nasionale rekeninge-statistiek is baie nuttig vir die formulering van breë ekonomiese beleid en vir navorsing m.b.t. ekonomiese groei en strukturele veranderings in die volkshuishouding, en vorm ook die basis van middeltermyn ekonomiese vooruitskattings soos dié wat in die Ekonomiese Ontwikkelingsprogram vervat is. Jaarlikse nasionale rekeninge-statistiek is egter van beperkte nut by die formulering van korttermyn monetêre en fiskale beleid. Vir hierdie doel word nasionale rekeninge op 'n kwartaallikse of selfs maandelikse basis vereis. Kwartaallikse of maandelikse statistiek is ook nuttig om die bestedingsposte wat die ekonomiese bedrywigheid onderskraag, te ontleed, en om die onderliggende sterkte of swakheid van die ekonomiese toestand op 'n bepaalde tydstip te bepaal. Die inligting vorm ook die basis van ekonometriese studies.

Ten einde in hierdie behoeftes te voorsien, het die Reserwebank in 1960 inligting begin versamel om die nasionale rekeninge op 'n kwartaallikse basis saam te stel. Aangesien die basiese inligting wat die kwartaallikse ramings ten grondslag lê aanvanklik nie beskikbaar was nie en daarná aan aansienlike foutegrense onderhewig was, is die kwartaallikse nasionale rekeninge-syfers in die vroeë stadiums nie betroubaar genoeg geag vir publikasie nie en was dit ook onderhewig aan herhaalde hersienings. Gevolglik was die Reserwebank ongeneë om hierdie ramings te publiseer alhoewel hulle gereeld bereken is en die neigings in die jaarlikse en kwartaallikse oorsigte van die Reserwebank gebruik is. Grafieke wat die neigings in die seisoensaangesuiwerde groothede, uitgedruk teen 'n jaarkoers, getoon het, het gereeld in die *Kwartaalblad* en die *Jaarlikse Ekonomiese Verslag* van die Reserwebank verskyn.

Met die verbetering in die basiese statistiek, het die Reserwebank besluit om vir die eerste keer sekere

seisoensaangesuiwerde en onaangesuiwerde kwartaallikse nasionale rekeninge-gegewens in die *Kwartaalblaai* van Maart en Junie 1971 te publiseer. Historiese kwartaallikse gegewens vir die tydperk 1960 tot 1970 is ook gepubliseer in tabelle 4 en 5 van „'n Statistiese aanbieding van die nasionale rekeninge van Suid-Afrika vir die tydperk 1946 tot 1970“, wat as 'n *Bylaag* tot die Reserwebank se *Kwartaalblad* van Junie 1971 verskyn het. Aangesien die kwartaalsyfers aan groter foutegrense as die jaarsyfers onderhewig was, is die kwartaallikse ramings aanvanklik tot die naaste R100 miljoen afgerond. Daarná het die Reserwebank, in die Junie 1975-uitgawe van sy *Kwartaalblad*, die kwartaallikse syfers tot die naaste miljoen rand afgerond, en daarbenewens ook twee tabelle bygevoeg wat meer besonderhede oor die private verbruiksbesteding en die bruto binnelandse vaste investering op 'n kwartaallikse basis bevat het.

Die doel van hierdie *Bylaag* is om vir die tydperk 1960 tot 1974 kwartaallikse seisoensaangesuiwerde en onaangesuiwerde ramings van al die jaarlikse nasionale rekeninge-gegewens wat tans in die *Kwartaalblad* verskyn, te publiseer, afgerond tot die naaste miljoen rand. Dit word vertrou dat die publikasie van hierdie kwartaallikse ramings nuttig sal wees vir navorsers op die gebied van korttermyn ekonomiese neigings.

Soos hierbo reeds genoem is, is kwartaallikse ramings minder noukeurig, en daarom ook minder betroubaar, as jaarlikse syfers en moet hulle derhalwe slegs as benaderde aanwysers van breë neigings beskou word. Daar moet ook in gedagte gehou word dat kwartaallikse nasionale rekeninge-statistiek aan gereelde en aansienlike hersienings onderhewig is, in die besonder wat die jongste kwartale betref. Hierdie verskynsel is nie net op Suid-Afrika van toepassing nie maar op die gegewens van alle lande waar kwartaallikse ramings gemaak en gepubliseer word.

Die vernaamste redes vir die deurlopende hersiening van kwartaallikse ramings is die volgende: (1) kwartaallikse statistiek wat op die jongste kwartaal of twee kwartale betrekking het is, en sal altyd, van 'n voorlopige aard wees; (2) die jaarlikse nasionale rekeninge word

gewoonlik een keer per jaar vir 'n paar jaar terug hersien en gevolglik moet die betrokke kwartaallikse gegewens dan ook gewysig word; (3) sensusresultate wat as basis vir die jaarsyfers dien, kom gewoonlik eers jare ná die werklike datum van die sensus beskikbaar en maak die hersiening van sowel die jaarlikse as die kwartaallikse syfers noodsaaklik; (4) ekonomiese tydreeks wat as basis vir kwartaalramings dien, is op *steekproefopnames* gebaseer en is gevolglik aan 'n sekere foutegrens onderhewig; (5) seisoensindekse skakel seisoensinvloede slegs by benadering uit; en (6) seisoensfaktore word van tyd tot tyd hersien en gee aanleiding tot veranderinge in die seisoensaangesuiwerde syfers.

Berekeningsmetodes en inligtingsbronne

In hierdie afdeling word 'n kort beskrywing gegee van die bronne wat gebruik word en die metodes wat aangewend word om die kwartaallikse ramings van die nasionale rekening te verkry.

Die bruto binnelandse produk

Vanaf die eerste kwartaal van 1969 is kwartaallikse ramings van die bruto binnelandse produk teen faktorkoste volgens ekonomiese bedrywigheid deur die Departement van Statistiek gemaak en gepubliseer. Die kwartaallikse ramings vir die tydperk 1960 tot 1968 is deur die Reserwebank gedoen. Die berekeningsmetodes en die inligtingsbronne wat deur die Reserwebank en die Departement van Statistiek vir die kwartaallikse ramings gebruik word, is soos volg:

(a) Vergoeding van werknemers

Die berekening van die vergoeding van werknemers op 'n kwartaallikse basis is gebaseer op maandelikse en kwartaallikse gegewens van lone en salarisse wat aan werknemers in feitlik alle sektore van die volkshuishouding betaal word en wat deur die Departement van Statistiek ingesamel en gepubliseer word. Tans dek hierdie reekse meer as tagtig persent van alle lone en salarisse wat in die nie-landbousektor van die volkshuishouding verdien word. Kwartaallikse lone en salarisse wat deur die landbousektor betaal word, word deur die Departement van Landbou-ekonomie en -bemarking geraam.

(b) Bruto bedryfsurplus

Die bruto bedryfsurplus van *landbou, bosbou en visserij* word deur die Departement van Landbou-ekonomie en -bemarking geraam deur die waarde van intermediêre goedere en dienste verbruik en die vergoeding van werknemers van die bruto kontantontvangste van die landbou in 'n spesifieke kwartaal af te trek. Die bruto bedryfsurplus van *mynbou, fabriekswese en handel* word geraam op basis van die resultate van kwartaallikse opnames van finansiële statistiek deur die Departement van Statistiek. Geen kwartaallikse finansiële statistiek word tot nog toe vir die *konstruksiesektor* ingesamel

nie, en in hierdie geval word die bruto bedryfsurplus verkry deur middel van die interpolasie en ekstrapolasie van jaarsyfers op basis van die waarde van geboue wat gedurende 'n spesifieke kwartaal voltooi is. Vir die sektor *elektrisiteit, gas en water* word die bedryfsurplus bereken uit kwartaallikse inligting wat van die belangrikste van die betrokke ondernemings ingesamel word. In die geval van die sektor *vervoer, opberging en kommunikasie* word die bruto bedryfsurplus van die S.A. Spoorweë bereken uit die maandelikse publikasie van sy bedryfsresultate, terwyl dié van die Departement van Pos- en Telekommunikasiewese gebaseer word op kwartaallikse gegewens wat aan die Reserwebank en die Departement van Statistiek verstrekkend word. Finansiële gegewens m.b.t. *finansiële instellings* word deur die Reserwebank van monetêre bankinstellings, bouverenigings en versekeraars verkry. In die geval van *vaste eiendom* word die bedryfsurplus geraam op basis van die totale aantal wooneenhede en die indekse van huis- en woonstelhuur.

Om die bruto binnelandse produk teen *faktorkoste* na *markpryse* te herlei, word indirekte belastinge bygevoeg en subsidies afgetrek. Hierdie twee poste word verkry uit 'n ontleding van owerheidsrekeninge deur die Reserwebank. Om die bruto *nasionale* produk teen markpryse te verkry, word netto faktorbetalinge aan die buiteland afgetrek van die ramings van die bruto *binnelandse* produk. Hierdie betalinge word verkry uit betalingsbalansgegewens wat deur die Reserwebank saamgestel word.

Private verbruiksbesteding

Die kwartaallikse ramings van private verbruiksbesteding word op 'n groot aantal bronne gebaseer. Die besteding aan voedsel word geraam deur die Departement van Landbou-ekonomie en -bemarking, wie se berekenings weer gebaseer word op kwartaallikse gegewens betreffende die bemarking van 'n aantal van die belangrikste landbouprodukte. Die verbruiksbesteding aan drank en tabak word geraam op basis van maandelikse aksynssyfers. Ramings van die besteding aan klerasie, skoeisel, meubels en toebehore, medisyne, ontspannings- en vermaaklikheidsgoedere, ens., word gebaseer op maandelikse inligting van kleinhandelsverkope wat deur die Departement van Statistiek ingesamel word. Die waarde van nuwe vervoertoerusting wat in elke kwartaal deur huishoudings aangekoop word, word verkry deur die aantal motorvoertuie en motorfietse maandeliks verkoop met toepaslike pryse te vermenigvuldig. Onderhoudskoste van private motorvoertuie soos petrol, olie, bande en onderdele word bereken deur van inligting oor die bedryfsinkomste van die motorhandel, wat deur die Departement van Statistiek gepubliseer word, gebruik te maak. Huur betaal word gebaseer op die aantal wooneenhede en die gemiddelde huur van huise en woonstelle wat deur die Departement van Statistiek ingesamel word. Die oorblywende gedeelte van die

private verbruiksbesteding op 'n kwartaallikse basis word bereken op basis van diverse maandelikse en kwartaallikse reekse soos die inkome van die S.A. Spoorweë en die Departement van Pos- en Telekomunikasiwese, die aantal geboortes en sterfgevälle, verkope van koerante en tydskrifte, hospitaalgelde wat die provinsiale administrasies toeval, lisensiegelde ingevorder, ens.

Owerheidsverbruiksbesteding

Die lopende besteding van die algemene owerheid omvat die verbruiksbesteding deur al die nie-handelsdepartemente van die sentrale, provinsiale en plaaslike owerhede. Verbruiksbesteding deur die sentrale regering word voorlopig gebaseer op die uitreikings deur die Skatkisrekening en daarna hersien op basis van inligting oor werklike besteding soos verkry van die Departement van Statistiek, en van opgawes wat deur buitebegrotingsliggame aan die Reserwebank verstrekk word. Die betrokke kwartaallikse besteding deur die provinsiale administrasies word saamgestel uit opgawes wat direk aan die Reserwebank verstrekk word, terwyl dié van plaaslike owerhede geraam word uit kwartaallikse gegewens wat deur die Departement van Statistiek ingesamel word.

Bruto binnelandse investering

Die investering van die openbare owerhede, d.w.s. die sentrale regering, provinsiale administrasies en plaaslike owerhede, sowel as dié van openbare korporasies, word geraam op basis van kwartaallikse opgawes wat aan die Reserwebank verstrekk word deur die S.A. Spoorweë, die Departement van Pos- en Telekomunikasiwese, die grootste openbare korporasies, al die provinsiale administrasies en van inligting wat verkry word van 'n steekproef van die vernaamste regeringsdepartemente en plaaslike owerhede.

Wat die investering van die private sektor betref, word die investering van die *landbou* deur die Departement van Landbou-ekonomie en -bemarking geraam op basis van kwartaallikse opnames. Vaste investering deur die *fabriekswese* en *mynbou* word gebaseer op kwartaallikse steekproefopnames van kapitaaluitgawes wat deur die Departement van Statistiek onderneem word. Ramings van die investering aan *woongeboue* en die besteding aan geboue deur die sektore *handel*, *private vervoer*, *finansiële instellings*, ens., word gebaseer op die waarde van geboue voltooi in die metropolitaanse en sekere ander stedelike gebiede, wat op 'n maandelikse basis deur die Departement van Statistiek ingesamel word. Die besteding aan masjinerie deur die handel word bereken deur gebruik te maak van die resultate van kwartaallikse opnames van die Departement van Statistiek t.o.v. die groot-, klein- en motorhandel. Dieselfde bronne word gebruik om die verandering in voorrade te raam. *Oordragkoste* word gebaseer op die hereregte wat deur die sentrale regering ingevorder word.

Seisoensaansuiwering van nasionale rekeningegewens

Die meeste nasionale rekeninge-reekse wys 'n duidelike seisoenspatroon, wat voortvloei uit faktore soos weerstoestande, wat die produksie en bemarking van landbou-oeste beïnvloed; openbare vakansiedae en sekere feesdae soos Kersfees en die Paasnaweek, wat die persoonlike besteding beïnvloed; belastinginvorderings op spesifieke datums van die jaar, wat 'n invloed op die owerheidsinkomste en maatskappybesparing het; ens. In hierdie gevalle is dit moeilik om die basiese onderliggende neigings in die gegewens te bepaal, omdat hulle deur die gereelde seisoenspatroon verberg word. Om hierdie rede is dit wenslik om die invloed van seisoensbewegings uit die ekonomiese gegewens te verwyder, ofskoon dit slegs by benadering gedoen kan word.

Seisoensfaktore of -indekse word gebaseer op die seisoenspatroon wat in 'n spesifieke reeks oor 'n aantal jare voorkom, maar is natuurlik aan 'n sekere foutegrens onderhewig of hulle noual konstant gehou of geleidelik verander word. Nieteenstaande die probleme wat aan die tegniek van aansuiwering van gegewens vir seisoensinvloede verbonde is, sal die aangesuiwerde totale 'n meer getroue beeld van die basiese ekonomiese toestand gee as die onaangesuiwerde gegewens. As die seisoensaangesuiwerde kwartaallikse gegewens met vier vermenigvuldig word, word 'n aanduiding verkry van die moontlike omvang van die jaartotaal indien die vlak van die ekonomiese bedrywigheid van die spesifieke kwartaal vir vier agtereenvolgende kwartale sou voortduur. Die totale wat op hierdie wyse verkry word, word aangedui as „seisoensaangesuiwer teen 'n jaarlikse koers”.

Uit 'n aantal bestaande metodes van seisoensaansuiwering van ekonomiese tydreekse, het die Reserwebank die X-11 Variant van die *“U.S. Census Method II”* gekies. Hierdie metode, wat tans algemeen dwarsdeur die wêreld gebruik word, is in besonderhede bespreek in die *Bylaag tot die Suid-Afrikaanse Reserwebank Kwartaalblad*, September 1971, getiteld „'n Statistiese aanbieding van uitgesoekte ekonomiese aanwysers van Suid-Afrika vir die tydperk 1946 tot 1970”.

16 Verdeling van nasionale inkome ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 55-56
17 Bruto binnelandse produk volgens tipe ekonomiese bedrywigheid ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 57-58
18 Private verbruiksbesteding ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 59-60
19 Private verbruiksbesteding ingedeel volgens dienste en duursaamheid van goedere ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 61-68

20	Seasonally adjusted gross and net domestic investment by type of organisation: Quarterly figures at an annual rate	A 69-76
21	Seasonally adjusted gross domestic fixed investment by kind of economic activity: Quarterly figures at an annual rate	A 77-84
22	Seasonally adjusted change in inventories by kind of economic activity: Quarterly figures at an annual rate	A 85-92
23	Seasonally adjusted gross domestic investment by type of asset: Quarterly figures at an annual rate	A 93-94
24	Seasonally adjusted financing of gross domestic investment: Quarterly figures at an annual rate	A 95-96
25	Seasonally adjusted personal income and expenditure: Quarterly figures at an annual rate	A 97-98
26	Seasonally adjusted current revenue and expenditure of general government: Quarterly figures at an annual rate	A 99-100

General notes

—denotes value equal to nil
*denotes preliminary figures

20	Bruto en netto binnelandse investering volgens tipe organisasie ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 69-76
21	Bruto binnelandse vaste investering volgens tipe ekonomiese bedrywigheid ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 77-84
22	Verandering in voorrade volgens tipe ekonomiese bedrywigheid ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 85-92
23	Bruto binnelandse investering volgens tipe bate ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 93-94
24	Finansiering van bruto binnelandse investering ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 95-96
25	Persoonlike inkome en uitgawe ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 97-98
26	Lopende inkome en uitgawe van algemene owerheid ná uitskakeling van seisoensinvloed: Kwartaalsyfers teen 'n jaarlikse koers	A 99-100

Algemene opmerkings

—dui aan 'n waarde gelyk aan nul
*dui voorlopige syfers aan

1. Lopende besteding aan salarisse en lone en goedere en ander dienste van nie-kapitale aard van die algemene afdelings, en nie die sake-ondernemings nie, van openbare owerhede. Openbare owerhede sluit in alle afdelings van die sentrale regering, provinsiale administrasies, plaaslike owerhede, die administrasie van Suidwes-Afrika en ander owerhede soos bestaansbeveiligingsfondse, die S.A. Bantoetrust, die Transkeise Regering, ens.

2. Na aansuiwering ten opsigte van voorraadwaardering.

3. Volgens definisie is hierdie totaal gelyk aan die bruto binnelandse produk.

1. Current expenditure on salaries and wages and goods and other services of a non-capital nature of the general departments, and not the business enterprises, of public authorities. Public authorities include all departments of the central government, provincial administrations, local authorities, the administration of South West Africa and other authorities, e.g. social security funds, S.A. Bantu Trust, Transkeian Government, etc.

2. After inventory valuation adjustment.

3. According to definition, this total equals gross domestic product.
