General notes

- ... denotes not available
- denotes a value equal to nil
- 0 denotes a value between nil and half of the measuring unit

Algemene opmerkings

- ... duur nie beskikbaar nie
- duur aan 'n waarde gelijk aan nul
- 0 duur aan 'n waarde tussen nul en die helfte van die meeteenheid

Labour, price and other selected economic indicators of South Africa, 1923-1993

Consistent data stretching back over long periods of time are indispensable for economic analyses. Through its publication of time series in its *Quarterly Bulletin*, the Reserve Bank attempts to satisfy the statistical needs of as many economic analysts as possible. Unfortunately, constraints imposed by the size and format of the *Quarterly Bulletin* prevent the publication of data over periods deemed long enough by many analysts and researchers; the Bank often has to respond to requests for data covering longer time periods. In order to meet this demand, the Reserve Bank has already published five supplements providing historical data on certain specific fields. In this Supplement to the *Quarterly Bulletin*, time series over a long period of time are published for the so-called "General Economic Indicators", covering the information provided in Tables S115 to S121 in the Bulletin.

All the currently published time series on "General Economic Indicators" in the *Quarterly Bulletin* are published in this supplement as far back as possible in a consistent and comparable way over the whole length of the series. Secondly, care has been taken that series published as indices use 1990 as base year, and those that are calculated at constant prices use 1990-based deflators. Lastly, seasonally adjusted data¹ have been calculated for all those series that display a stable seasonal pattern. The basic approach followed was to adjust each component of composite totals, and then to add up all the seasonally adjusted components to arrive at a seasonally adjusted total or subtotal.

The Central Statistical Service is the main source of the basic data contained in these tables. Because of changes in sample surveys and in the weights of composite indices, the time series released by the Central Statistical Service may not always be comparable over time. However, the separate series have been linked together as far as possible, so as to supply uninterrupted and consistent time series. The annual figures appearing in the tables have been compiled as the average of the seasonally unadjusted monthly or quarterly data.

Employment in the non-agricultural sectors

Information regarding *total formal employment* in the non-agricultural sectors of the economy is being furnished only from 1967, because the employment totals in the trade sector and in private services are not readily available for years before that year.

The time series regarding *total employment in the private sector* is not strictly comparable, because

information on all components of employment is not available from 1960. From the first quarter of 1960 to the fourth quarter of 1962, total employment in the private sector consists only of employment by the control boards, the manufacturing industry, the mining industry, the construction industry and the electricity-generating industry. Information regarding employment by universities has been added from the first quarter of 1963 and information regarding employment by the trade sector and private services from the first quarter of 1967. This has been followed by the inclusion of the employment data of the private road transportation from the first quarter of 1975, and of the technikons from the first quarter of 1986.

Unemployment and labour costs in the non-agricultural sectors

The seasonally adjusted total number of *registered unemployed workers* increased substantially from July 1990 because of a change in the definition of "registered unemployment". Workers who received unemployment benefits have been included in the statistics on unemployment from July 1990, even though such workers may not have been registered for work placement. This lack of comparability over time in the employment data also applies to the *remuneration per worker*.

Labour productivity was calculated as the ratio of the non-agricultural gross domestic product to the number of workers in the non-agricultural formal sectors. *Nominal unit labour costs* were calculated as the total value of salaries and wages paid in the non-agricultural sectors divided by the non-agricultural gross domestic product.

Manufacturing: Orders, production, sales and utilisation of production capacity

The basic data in this table were obtained by means of sample surveys in all or selected industries in manufacturing, as published by the Central Statistical Service.

The value of *new orders* received in the manufacturing sector was calculated by the Reserve Bank, using the value of unfilled orders and sales. The resultant nominal values have then been deflated by the production price index for manufactured goods, so as to obtain a time series at constant prices. The value of *unfilled orders* since 1975 is not comparable with that of the earlier period because of the implementation of a more representative sample survey in that year.

From 1975, the value of *manufacturing sales* at constant prices has been compiled by adding together the monthly individual components. Only the total quarterly values are published for years before 1975.

¹ US Census Program, method II - X - 11 Variant was applied in the computations.

Although the total values are, therefore, not strictly comparable over time, the quarterly totals for the period before 1975 have been converted into monthly totals and linked to the rest of the data.

Strictly speaking, the series of the physical volume of *manufacturing production* before 1978, as compiled by the Central Statistical Service, is also not comparable with that of the subsequent period. Before 1978 the data represent physical quantities manufactured, whereas from 1978 the physical volume of manufacturing production has been calculated from the current-value data adjusted for the effect of price changes. To obtain comparability over time, the indices for the period prior to January 1978 have been corrected by a constant factor that has been set equal to the ratio of the old to the revised series in calendar year 1978.

The index of the physical volume of durable manufactured goods production was obtained by calculating a weighted average of the physical production indices of those sectors producing basic metals and metal products, non-metallic mineral products, machinery, transport equipment, and timber and furniture. The index of the physical volume of the production of non-durable goods has been derived from the difference between the weighted indices of total production and that of durable goods production.

The percentage *utilisation of production capacity* for durable and non-durable goods industries has been calculated in a similar way as that of the two components of the physical volume of manufactured goods. The index of *labour productivity* in manufacturing was calculated as the ratio of the physical volume of production of manufactured goods to the number of workers in the manufacturing sector. The index of *nominal unit labour costs* in manufacturing was calculated as the total value of salaries and wages paid in the manufacturing sector divided by the physical volume of manufacturing production. Deflation of the result by the production price index for manufactured goods then gave the index of the *real unit labour costs*.

Indicators of real economic activity

The value of *building plans passed* covers the value of new buildings and additions and alterations to existing buildings. The coverage of this series was increased markedly from January 1970 through the inclusion in the sample of a number of additional local authorities. In order to obtain comparability over time, the indices for the period prior to January 1970 have been adjusted using data available for both the old and new samples in respect of the first quarter of 1970. Similar adjustments have been applied to the series on the value of *buildings completed*. These values have then been deflated by appropriate building cost deflators.

The value of *wholesale sales* as well as *retail sales* at constant 1990 prices before 1977 were linked to the indices for the subsequent period with the aid of a constant scale factor.

Composite business cycle indicators

The composite indices for South Africa have been revised recently for the years since 1979. (See the relevant "note" in this *Quarterly Bulletin*.) The data between 1978 and 1979 have, however, been linked to ensure an uninterrupted and consistent series. The composite indices for South Africa's trading partner countries, namely the United States of America, the United Kingdom, Germany, France, Italy, Canada and Japan, have been calculated as weighted averages of indices for the individual countries. The relative sizes of these countries' gross domestic products were used as weights.

Consumer prices

From 1986, the price indices have been seasonally adjusted by the Central Statistical Service. For years prior to 1986, the seasonal adjustment has been done by the Reserve Bank, and these older seasonal adjusted data have been linked to those published by the Central Statistical Service.

Production prices

Price information for agriculture, forestry and fishing for the period January 1961 to March 1969 contains only information for the agricultural sector. Information on forestry has been added from April 1969, and information on fishing from April 1970. The price index of electricity, gas and water for the period January 1961 to March 1970 consists only of information for electricity and gas. Information on the price of water has only been available since April 1970.

Since the beginning of 1990 the seasonally adjusted data, as published by the Central Statistical Service, have been used and have been linked to the production price index adjusted for seasonal variation by the Reserve Bank.

Arbeids-, prys- en ander uitgesoekte ekonomiese aanwysers van Suid-Afrika, 1923 – 1993

Deurlopende inligting wat oor lang tydperke strek is onontbeerlik vir ekonomiese ontledings. Met die vrystelling van tydreekse in die *Kwartaalblad* poog die Reserwebank om te voldoen aan die statistiese behoeftes van soveel as moontlik ekonomiese ontleders. Beperkings wat deur die grootte en die formaat van die *Kwartaalblad* opgelê word, verhoed ongelukkig die vrystelling van inligting oor tydperke wat deur baie ontleders en navorsers as lank genoeg beskou word; die Bank moet dikwels reageer op versoeke vir inligting wat oor langer tydperke strek. Ten einde aan hierdie versoeke te voldoen, het die Reserwebank reeds vyf bylaes vrygestel wat historiese inligting oor sekere besondere onderwerpe bevat. In hierdie bylaag tot die *Kwartaalblad* word tydreekse wat oor 'n lang tydperk strek vrygestel vir die sogenaamde "Algemene Ekonomiese Aanwysers", wat die inligting bevat wat in tabelle S115 tot S121 in die *Kwartaalblad* gepubliseer word.

Al die tydreekse wat tans as "Algemene Ekonomiese Aanwysers" in die *Kwartaalblad* verskyn, word in hierdie bylaag so ver moontlik teruggevoer om deurlopende en vergelykbare gegewens oor die volle tydperk van die reekse te bied. Tweedens is sorg gedra dat die reekse wat as indekse vrygestel word, 1990 as basisjaar gebruik en dat dié wat teen konstante prys bereken is, gebruik maak van deflators wat op 1990 gebaseer is. Laastens is seisoensaangesuiwerde¹ gegewens bereken vir al die reekse wat 'n bestendige seisoenspatroon het. Die grondliggende benadering was om elke komponent van die saamgestelde totale aan te suiwer en al die seisoensaangesuiwerde komponente bymekaar te tel om 'n seisoensaangesuiwerde totaal of subtotaal te verkry.

Die Sentrale Statistiekdiens is die hoofbron van die basiese gegewens wat in hierdie tabelle vervat is. As gevolg van veranderings in die steekproefopnames en die gewigte van die saamgestelde indekse mag die tydreekse wat deur die Sentrale Statistiekdiens vrygestel word, nie altyd oor tyd vergelykbaar wees nie. Die onderskeie reekse is egter so ver as moontlik aaneengeskakel om 'n ononderbroke en vergelykbare tydreeks aan te bied. Die jaarsyfers wat in die tabelle voorkom is saamgestel as die gemiddelde van die nie-seisoensaangesuiwerde maandelikse of kwartaallikse gegewens.

Werkverskaffing in die sektore buite die landbou

Die gegewens van die totale formele werkverskaffing in die sektore van die ekonomie buite die landbou is slegs vanaf 1967 gepubliseer aangesien die totale werk-

verskaffing in die handelsektor en private dienste voor daardie jaar nie geredelik beskikbaar was nie.

Die tydreeks van die totale werkverskaffing in die private sektor is nie streng vergelykbaar nie aangesien die gegewens van die werkverskaffing vir al sy komponente nie vanaf 1960 beskikbaar is nie. Van die eerste kwartaal van 1960 tot die vierde kwartaal van 1962 bestaan die totale werkverskaffing in die private sektor slegs uit die werkverskaffing deur die beheerrade, die fabriekswese, die mynboubedryf, die konstruksiebedryf en die elektrisiteitsopwekkingsbedryf. Vanaf die eerste kwartaal van 1963 is die gegewens van die werkverskaffing deur universiteite en vanaf die eerste kwartaal van 1967 die gegewens van die werkverskaffing deur die handelsektor en die private dienste bygetel. Dit is gevvolg deur die insluiting van die gegewens van die werkverskaffing van die private padvervoer vanaf die eerste kwartaal van 1975 en dié van die technikons vanaf die eerste kwartaal van 1986.

Werkloosheid en arbeidskoste in die sektore buite die landbou

Die seisoensaangesuiwerde totale getal geregistreerde werkloses het sedert Julie 1990 aansienlik toegeneem as gevolg van 'n verandering in die definisie van geregistreerde werkloosheid. Vanaf Julie 1990 word die werkers wat werkloosheidsvoordele ontvang ook by die gegewens van werkloosheid ingesluit, selfs al het hulle nie vir werkplasing geregistreer nie. Die gebrek aan vergelykbaarheid oor tyd in die gegewens van werkverskaffing is ook van toepassing op die vergoeding per werker.

Die arbeidsproduktiwiteit is bereken as die verhouding van die bruto binnelandse produk buite die landbou tot die aantal werkers in die formele sektore buite die landbou. Die nominale arbeidseenheidskoste is bereken deur die totale waarde van die salaris en lone wat in die sektore buite die landbou betaal is, met die bruto binnelandse produk buite die landbou te deel.

Fabriekswese: bestellings, produksie, verkope en die benutting van produksiekapasiteit

Die basiese gegewens in hierdie tabel is verkry deur middel van steekproefopnames in uitgesoekte of alle nywerhede in die fabriekswese soos dit deur die Sentrale Statistiekdiens vrygestel is.

Die waarde van die nuwe bestellings wat deur die fabriekswese ontvang word, is deur die Reserwebank bereken deur die waarde van onvoltooide bestellings en verkope te gebruik. Die berekende nominale waardes is daarna met die produksieprysindeks vir die fabrieksproduksie gedefleer om 'n tydreeks teen konstante prys te verkry. Die waarde van onvoltooide bestellings sedert 1975 is nie vergelykbaar met dié van die vroeëre tydperk

¹ Die "US Census Program, method II-X-11 Variant" is in die berekenings gebruik.

nie as gevolg van die inwerkingstelling van 'n meer verteenwoordigende steekproefopname in daardie jaar.

Die waarde van die *verkope in die fabriekswese* teen konstante pryse is saamgestel deur die individuele komponente vanaf 1975 op 'n maandelikse grondslag bymekaar te tel. Voor 1975 is slegs die totale kwartaallikse waardes vrygestel. Hoewel die totale waardes derhalwe nie streng oor tyd vergelykbaar is nie, is die kwartaallikse totale vir die tydperk voor 1975 omgeskakel in maandelikse totale en met die res van die gegewens verbind.

Die reeks oor die fisiese omvang van *fabrieksproduksie* voor 1978, soos dit deur die Sentrale Statistiekdiens saamgestel word, is streng gesproke ook nie vergelykbaar met dié van die daaropvolgende tydperk nie. Die gegewens voor 1978 het die fisiese hoeveelhede wat geproduseer is verteenwoordig, terwyl die fisiese omvang van fabrieksproduksie sedert 1978 bereken is op grond van die gegewens teen heersende waardes wat vir die uitwerking van prysveranderings aangesuiwer is. Ten einde vergelykbaarheid oor tyd te verkry, is die indekse vir die tydperk voor Januarie 1978 aangepas met 'n konstante faktor wat gelyk gestel is aan die verhouding tussen die ou en die nuwe reeks in die kalenderjaar 1978.

Die indeks van die fisiese omvang van die produksie van duursame goedere is verkry deur 'n geweegde gemiddelde te bereken vir die indekse van die fisiese produksie van die sektore wat basiese metale en metaalprodukte, nie-metaal mineraalprodukte, masjinerie, vervoertoerusting en hout en meubels vervaardig. Die indeks van die fisiese omvang van die produksie van nie-duursame goedere is bereken as die verskil tussen die geweegde indekse van die totale produksie en dié van die produksie van duursame goedere.

Die *persentasiebenutting van die produksievermoë* van nywerhede wat duursame en nie-duursame goedere produseer is op dieselfde wyse bereken as die twee komponente van die fisiese omvang van die fabrieksproduksie. Die indeks van *arbeidsproduktiwiteit* in die fabriekswese is bereken as die verhouding van die fisiese omvang van die fabrieksproduksie tot die aantal werkers in die fabriekswese. Die indeks van die *nominale arbeidseenheidskoste* in die fabriekswese is bereken as die totale waarde van die salarisste en lone wat in die fabriekswese betaal is, gedeel deur die fisiese omvang van die fabrieksproduksie. Die indeks van die *reële arbeidseenheidskoste* is verkry deur die berekende nominale arbeidseenheidskoste te defleer met die produksieprysindeks vir die fabrieksproduksie.

Aanwysers van reële ekonomiese bedrywigheid

Die waarde van *bouplanne wat goedgekeur is* sluit die waarde van nuwe geboue en aanbouings en veranderings aan bestaande geboue in. Die omvang van hierdie reeks is vanaf Januarie 1970 aansienlik uitgebrei deur die insluiting by die steekproef van 'n aantal bykomende plaaslike owerhede. Ten einde vergelykbaarheid oor tyd te verkry, is die indekse vir die tydperk voor Januarie

1970 aangepas deur die gegewens vir sowel die ou as die nuwe steekproewe met betrekking tot die eerste kwartaal van 1970 te gebruik. Soortgelyke aanpassings is gemaak aan die reeks van die waarde van geboue wat *voltooi is*. Hierdie waardes is daarna met gepaste deflators vir boukoste gedefleer.

Die waarde van die *groothandelsverkope* sowel as die *kleinhandelsverkope* teen konstante 1990-pryse voor 1977 is met behulp van 'n konstante faktor met die indekse vir die daaropvolgende tydperk verbind.

Saamgestelde konjunkturaanwysers

Die saamgestelde indekse vir Suid-Afrika is onlangs vir die jare sedert 1979 hersien. (Sien die relevante aantekeninge in hierdie *Kwartaalblad*.) Die inligting tussen 1978 en 1979 is egter verbind om 'n ononderbroke en vergelykbare reeks te verseker. Die saamgestelde indekse vir die handelsvennootlande van Suid-Afrika, naamlik die Verenigde State van Amerika, die Verenigde Koninkryk, Duitsland, Frankryk, Italië, Kanada en Japan, is bereken as die geweegde gemiddelde van die indekse vir die individuele lande. Die relatiewe grootte van die bruto binnelandse produk van die onderskeie lande het as die gewigte gedien.

Verbruikerspryse

Vanaf 1986 word die prysindekse deur die Sentrale Statistiekdiens vir seisoensveranderings aangesuiwer. Voor 1986 is die seisoensaansuiwering deur die Reserwebank gedoen en verbind aan die seisoenaangesuiwerde reeks wat deur die Sentrale Statistiekdiens vrygestel word.

Produksiepryse

Die gegewens oor die prys vir die landbou, bosbou en visserye vir die tydperk van Januarie 1961 tot Maart 1969 bevat slegs die gegewens vir die landbousektor. Die gegewens oor die bosbou is vanaf April 1969 bygevoeg en die gegewens vir die visserye vanaf April 1970. Die prysindeks vir elektrisiteit, gas en water vir die tydperk van Januarie 1961 tot Maart 1970 bevat slegs die gegewens vir elektrisiteit en gas. Inligting oor die prys van water het eers in April 1970 beskikbaar gekom.

Sedert die begin van 1990 is die seisoenaangesuiwerde gegewens van die Sentrale Statistiekdiens gebruik en is dit verbind met die produksieprysindeks wat deur die Reserwebank vir seisoensveranderings aangesuiwer is.
