

CODI'S INFORMATION TECHNOLOGY SOLUTION

A hand holding a glowing lightbulb, symbolizing an idea or solution. The lightbulb is surrounded by various icons: a globe, a bar chart, a target, a handshake, a shield with a checkmark, a group of people, gears, a document, and a cloud with an arrow. The background is a blurred image of a person's hands.

CODI has developed an IT solution to support its core operational and resolution support functions. Since 1 October 2025, CODI has collected SCV data from banks in accordance with the Regulations, providing a consolidated view of depositors and covered deposits per bank to support resolution support planning, coverage assessment and timely depositor access in the event of a bank failure.

SCV submissions, together with reported qualifying and covered deposit balances, also support CODI's financial functions, including the calculation of deposit insurance premiums and liquidity contributions to the fund. In parallel, CODI continues to enhance its IT solution to support and improve depositor reimbursement and has implemented interim arrangements, including the appointment of payout agent banks, to ensure access to covered deposits within prescribed timelines.
