

Appendix B Standard Industrial Classification of all Economic Activities

An *institutional unit* (an enterprise such as a company) may be engaged in different kinds of production activities in different locations, producing various kinds of goods and services. For the analysis of production, it is necessary to use a more homogeneous unit than an enterprise. The *unit* is an establishment, defined as an enterprise or part of an enterprise situated in one location and engaged in mainly one type of production activity, which is its principal activity. An establishment can also be engaged in secondary activities, which generate a minor part of its production, or ancillary activities, which are production not intended for use outside the enterprise. An *enterprise* can consist of more than one establishment, but an establishment can belong to only one enterprise.

Based on the type of activity described in terms of a set of inputs, a production process and a set of outputs, establishments are grouped together into industries. An *industry* is defined as a group of establishments engaged in the same, or similar, kinds of production activity. Industries are classified according to the 1993 edition of the *Standard Industrial Classification of all Economic Activities (SIC)*. The *SIC* is based on the 1990 edition of the *International Standard Industrial Classification (ISIC)*, with suitable adaptations for local conditions. The *SIC* classification refers to the principal activity of establishments.

It is possible to classify institutional units by institutional sector class and by standard industrial class. However, institutional units can only broadly be classified into industries according to their principal class of product produced or service rendered. An example of the *SIC* classification of institutional units by organisation reporting to the South African Reserve Bank is the classification by banks of loans, advances and discounts according to major divisions, as provided by banks on returns to the Registrar of Banks. The major divisions (one-digit level) and divisions (two-digit level) of the *SIC* are shown in Table B1.

In the case of individuals and non-producing households there is no *SIC* classification as the *SIC* caters only for producing units. To address this problem, sector 0 of the *SIC* is further subdivided into divisions (two-digit level), major groups (three-digit level) and groups (four-digit level), as indicated in Table B2, for instance, where a reporting organisation needs to assign *SIC* codes to all its counterparties.

The complete *SIC* is published in the *Standard Industrial Classification of all Economic Activities* and can be obtained from:

8 The industries are classified according to the *Standard Industrial Classification of all Economic Activities (SIC)*, fifth edition. It is based on the third revision of the *International Standard Industrial Classification of all Economic Activities (ISIC)*, with suitable adaptations for local conditions.
